RETAIL CATALOGUE

TRIPLE SENSE

STRONG TAIL ACTION

• **Weedless Hook Nick**
3mm nick to hide and protect the hook

• **Black Back**
Realistic fish black back shade look

• **Hexagonal Glitter**
Glitter which emphasizes the reflection of light

• **Under-Nick**
5mm under-nick for easy hook set-up

• **7-Way Vibration**
By cutting off one or more paddles you can control vibration intensity

Weight 8.7g

Length 4.3 inch/11 cm

The first triple tale silicone in our market, with three different vibration intensities. By simply removing the tail pedal we define the action of the lure itself, so that the "Triple Sense" turns from aggressive, through moderate to slow vibrations into "all season" silicone. As such, it is ideally adapted to the demanding running water, the lakes with specific conditions, giving the more fishes, comparing to the standard supply of silicones. Optimal choice for classic jig, flexi or worm hook, and the system protects against hanging on "unrecoverable montages". On the field with many obstacles.

SHADOW

UNIVERSAL SHAD

● **Body Stabilizer**

Regulates stability of the whole body

● **Slim Body**

Very low water resistance body shape

● **Under-Nick**

5mm under-nick for easy hook set-up

● **Balanced Tail**

Tail which realistically replicates motion of a real fish

Weight 5.8g

Length 3.93 inch/10 cm

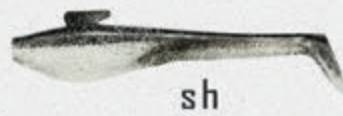

Conceptually different in comparison to the "Triple Sense", but related to the idea that the lures from this house are recognizable. Namely, "Shadow" is a unique combination of two basic concepts of silicones, bait fish and minnow forms. The longer (minnow) form is the recognizable detail of every good silicone for the zander. "Shadow" along the back of the backs draws a shiny line broken only by a back stabilizer styled in the form of a grafted feathers. The side surface of the silicone "bait fish" contour, folded at the beginning, turns into a veneered tail that ends with a sap at almost right angle. The combination of the two forms makes the "Shadow" lead by creating a multi-dimensional vibration, even in slow moves. The back stabilizer is useful in jerking or some faster control, when balancing the silicon stopping his turning around. If you remove the stabilizer, you get a belly roll and a very slow retreat. You can further reinforce this "flattening of the hips" using a flexi-jig, that's from where "shadow" get a confirmation of his name.

SNEAK

SMALL EXPERT

Weight 3.5g

Length 2.76 inch / 7 cm

Sneak is a shad of harsh, cut-off action that leaves a recognizable signature in the water when leading slow. It belongs to medium-vibration tires, moderate amplitude, which qualifies for the widest range of water situations. Depending on the mode of shrinkage and assembly, the "impression" that leaves in water changes significantly. On the classic jig head they are a slippery slipper, which on the flex jig or Texas montages is upgraded with a challenging dance of hips. Mounted on the Worm G-shape offset hook at the end of Carolina's will show its true face and justify the name, moving slowly and wide-frozen throughout the body. "Sneak" as well as the complete gamma "Nasha Lures" silicone comes in a complete range of decor, with details for ease of cleaning on worm hooks and back weedles channel.

EXECUTOR

THE SILENT TRICKSTER

Weight 5.1g

Length 4.3 inch/11 cm

Shaving the hedge on the classic jig head in the light of the new Ultra-Light Jigging techniques shows a lot of defects. Most are the result of a tough link between the cheater and the harsh, which suppresses the action of the lure and limits the technique of its handling. The Executor is a lure comparable to the ultra-lightweight concept of fishing, which requires of the lure to take maximum action to minimize the incentive. The periods of hibernation and slow decay, so important for ultra-light jigging with Executor, get a new dimension. On the texas montage, Executor dominates in situations where the slope is not active and is located in a difficult passage to the bottom of the spot. Carolina Montaga will give him maximum freedom of action during the active vintage period and a wide range of classic-jet-style driving techniques. For slow-motion presentations with plenty of rest at the bottom, the Executor will be mounted on a flexi jig in place while remaining in the predators view. Contra currents, slow and return flows, channels and lakes that often represent an unsolvable enigma to choose the guidance technique are just a challenge for Executor.

ASTRAL

DANCING WILD TAIL

Weight 4.9g

Length 3.93 inch/10 cm

Astral is a rough contrast between a compact body and a wide tail with an enlarged bolt on the arc, giving Astral a unique watermark, where two opposite vibrations are clearly delineated. The primary is the oscillation of the whole arc of the tail and is characterized by wide lateral fading, according to the subtle vibration of the last third of the tail along the longitudinal axis (similar to the minnow form of the vobler). The action of decay "Astral" rounds off the maximum challenge even in the period of "cold" skies where the moments of "levitation" are of importance. By changing the action and vibration depending on the choice of assembly and control techniques, "Astral" opens a wide range of possibilities. Beginning with a classic jig, through Texas and Carolina editing, to combining as a trailer tire to a spinner bait, "Astral" always offers a challenge more. The best example is just a worm hook on a flexi jig or flexi buckle, where the fine decay replaces the cut-off slapping.

GLIDER

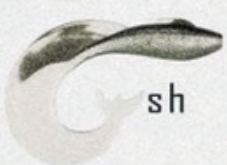

THE TAIL MASTER

Glider is a unique lure in the NL gamma. By combining the geometry of wide angles and materials from which the Glider has been made, it successfully overcomes the differences between the demanding sea and eccentric river sparring. It is equally successful in trolling or vertical jigging, as well as in heavy jigging of a cat or a large zander. Glider keeps steady vibration and unique action in running under all conditions. Narrate the Sea Glider with the conditions of fishing, without fear that the combination of lead and size hook will violate the action. On a jig hook, a flexi jig or one of the marine installations Glider is an optimally armed lure with no compromise on the account of hunting

JUMPY

THE UNSTOPPABLE SNACK

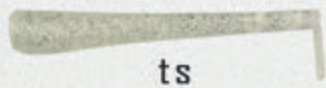

Jumpy is one of the smallest in the game Nesa Lures silicone game and there's a reason. We needed a "all-season" shad that will primarily serve as a "light" and "ultra light" variant that takes more and more waves. Jumpy is not a classic minnow form and what distinguishes it from others, and above all Sneak, which is the closest to its dimensions, is the angle and dimensions of the tail that leaves a specific and unseen signature in the water in palette of Nesa Lures silicone. Cut off the tail, a moderate amplitude that depends on the way it is guided, this shad is under the water that scared bait fleeing and represents an easy prey for a predator

GRIFFON

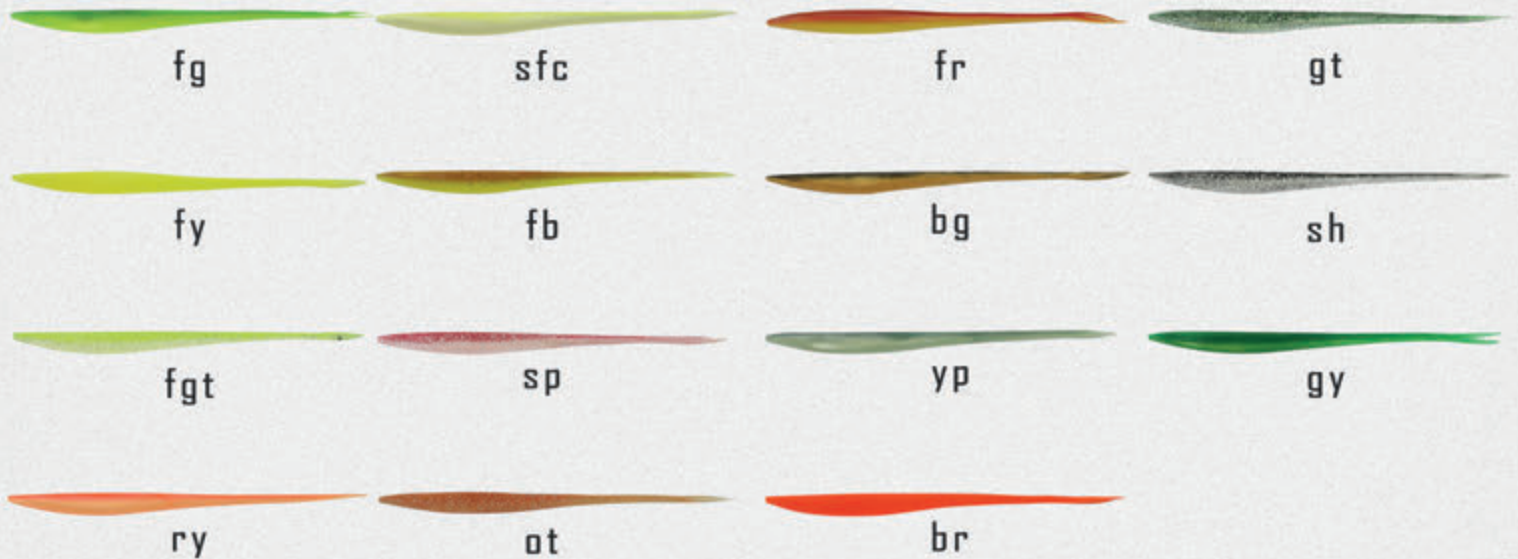

THE GRAVITY SHAD

The demanding segment of UL fishing is unthinkable without no-action silicone lures on one of the typical mounts that give the bait maximum autonomy. The titrating action of Gravity Shad places a new low oscillating N.L. shad at the very top among the fork baits. If you opt for a drop-shot presentation, Gravity Shad levitates in place on the tightening string. Gravity Shad lightly falls guided by split-shot, while being wriggled by Jiki mount or Flexi jig through the labyrinths at the bottom. At each mount, Gravity Shad leaves its unique signature. Gravity Shad is the right choice for a double mount with two rubbers lures guided by combined techniques. By using classic jig, the base silicon lure floats in the water stream, while the trailer rubber drops on the main string. Gravity Shad is the best as the trailer rubber on the double-jig, and for all ultra-light mount and presentation.

GHOTIC SHAD 180

BAIT FOR BIG GAME

King Size Body

Veoma veliko telo za prave predatore

Strong Paddle

Mala ali jaka palica koja se prilagođava svim tipovima vode

Eye Feature

Realistične oči

Weight 35g

Length 18cm

Although it was modeled after the Nesa Lures "Shadow" model, the Ghotic Shad 180 is conceptual brand new lure. What makes the "Ghotic" shad different from its smaller one The precursor, apart from the visual details, is the concept of double action. "Ghotic" works in two different granulations of materials that have different action when pulled and vibration. The 18cm "Ghotic" Shad is a "big game" lure geared for hunting predators, primarily catfish and large lake pike. Material granulation variation at make, as a final result it has two baits, the same shape but different actions. One at the guide prints a wide aperture path, which even with minimal flow and slow motion results in a slow motion effect of slow motion with wide with the tail and pedal bent. Very similar to the behavior of a large lake bridesmaid net. The form is the same, but significantly different in action, another Ghotic Shad granulation at keeping a sharp slap on the tail oscillating along the

NOMAD

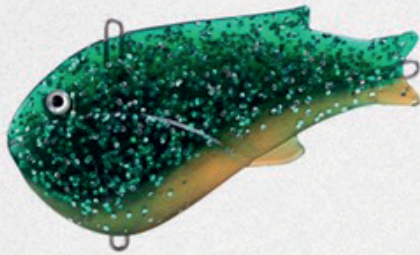

THE DEEP RUNNER

The universality of the lead-in bites often suppresses the fact that they are bond between the flickering action of the waiter and endless possibilities of silicon. Although targeting the same target, the active predator, Nomad carries a much wider band of optimum performance. Even if it seems quite slow at the first glance, Nomad is "packed" with more energy than a much larger bite. Irritating tottering action of Nomad offers a wide range of options. As its depth of guidance is not limited, it can be guided in the desired segment of depth by simple count-down technique. A unique combination of wounded prey and panic twitching fish separated from the flock constitute a proven trigger for predators attack. Double action, when withdrawn and decayed, gives Nomad a unique signature in the lead.

Squid

Neša Lures Cuttlefish and Squid are part of the life - like concept, a cheater of natural appearance and realistic movement. With optimal vibration and action that mimics natural movements of prey, it is crucial to provide a true copy of the natural appearance. From hunting dentex without difficulty at the bottom, Neša Lures Sipa and Lignja are intended demanding sea trolling of amberjack, grouper, tuna and leerfish, and it will not be separated by large sea bream. The weight of the lure without the weight of 80 grams is enough for both slow and fast sea trolling, with and without aggravation.
